2022

STRAIN CATALOG

LETTER FROM OUR TEAM

As we step off into the 2022 season, we wanted to take a moment to introduce ourselves, and give you a few words from all of us at **Golden Roots Nursery**. Earlier this year, we sat down to discuss goals and the upcoming season. At that meeting, we as a team decided to be the best.

We all agreed the only way to do this was to strive to be the best tissue culture nursery we could be. From our strain selection, our cleanliness, how we care for the plants starts with each and every single one of us.

We want to let you know how dedicated we are to you; our farmers. We've added tech and systems to ensure a great start to your season. This year we've added a grow R&D room and ran all of our strains to ensure that we only sell winners. We do not sell any clones or teens that we didn't flower in our R&D program to ensure what we sell you, is what we say it is!

We are excited to announce our in house breeding program! With all of that said, here we go! It's game time. We want to hear from you. Please let us know if you have any special requests, custom strains that need intellectual property protection, we got you.

TISSUE CULTURE

Tissue culture cloning has a built-in process that eliminates pests, fungus, and mold while preparing the plant tissue for cloning. A grower can be certain the generations to come will have a clean start.

Considering some of the most devastating pests in the industry can hide behind the width of a human hair and are smaller than dust mites, you want to be certain you are not propagating them around the site, or worse, trading them.

With traditional cuttings, mother plants are used, but with tissue culture all cuttings are grown in a sterile environment, ensuring a clean start every time!
